

PROFESSIONAL SAUNA LIGHT SYSTEM

SL-16L-RC / order code: 210-015

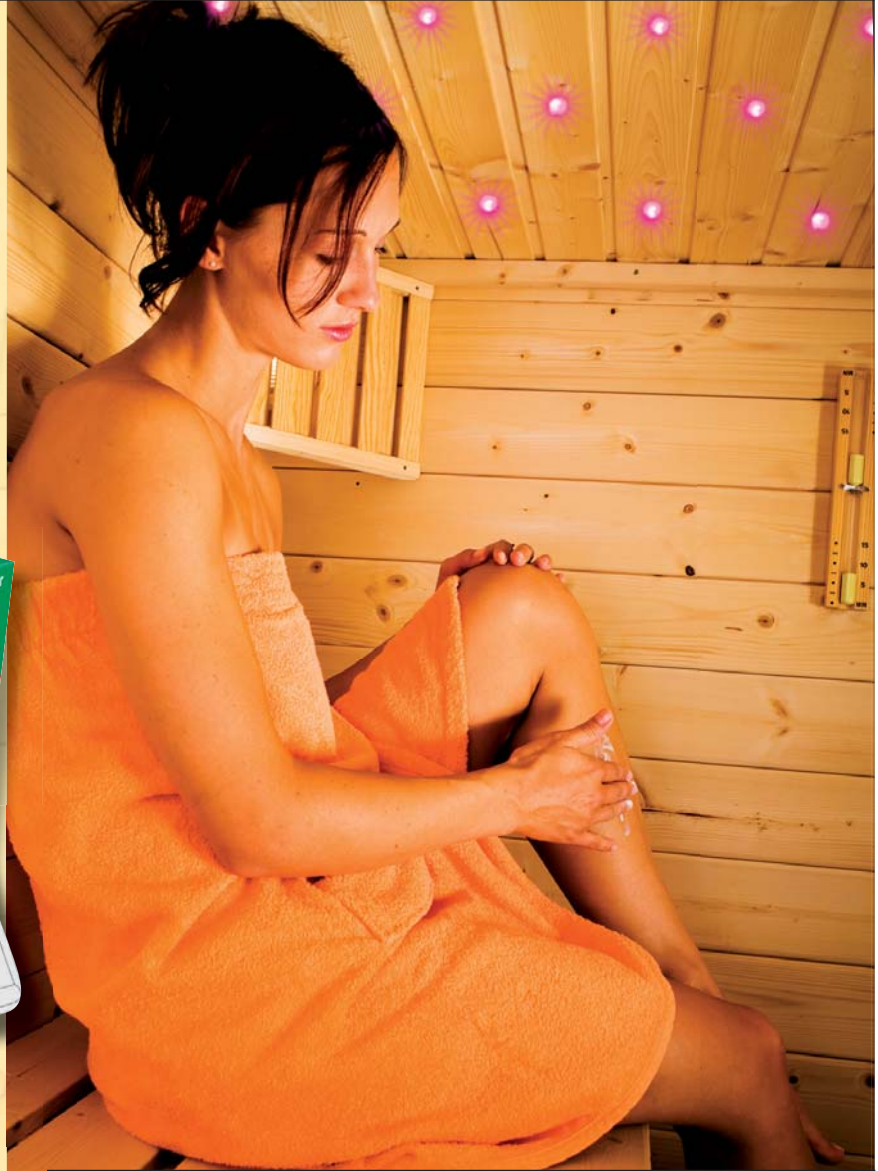

Decorative lighting system for sauna, pool and recreation areas. SL-16L-RC is specially developed for use in professional sauna.

This product uses a combination of LED and fiber optics. By placing the heat sensitive LED's on the outside of the sauna, the LED's are protected against the high sauna temperature and can reach a very long lifetime.

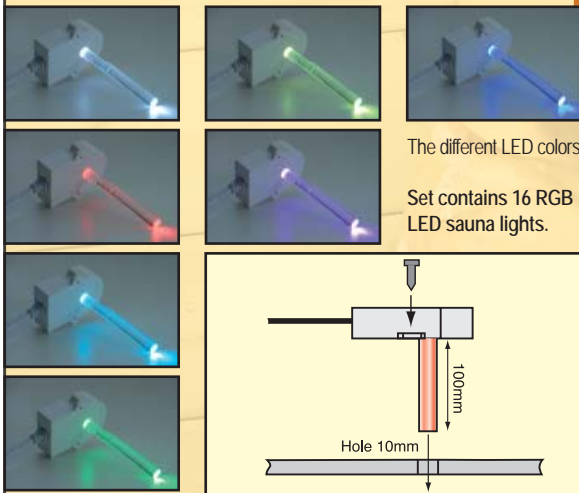

Set with 16 RGB LED sauna lights, power supply, controller and remote control. The acrylic tubes are easily mounted through holes in the ceiling of the sauna. With the supplied remote control you can choose between seven static colors or automatic color flow.

One remote control can control several sets within 30 m.

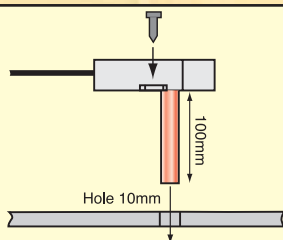

CONSUMER SAUNA LIGHT SYSTEM

The different LED colors

Set contains 16 RGB LED sauna lights.

L-SLML-72L-12V / order code: 210-005

FIBER OPTIC STAR LIGHT KITS

CONSUMER FIBER OPTIC STAR LIGHT - KIT 1

FOSL-100-20W (KIT) / order code: 833-001

Consists of 100 fiber strings divided in 25x2m, 25x3m, 25x4m and 25x5m. The engine is provided with a color wheel (4 colors) with twinkle effect, which, if desired, can change colors. A 20W Philips halogene lamp is the light source. The set includes 100 Tronix Star Endpieces (FO-001TR) to intensify the effect and is ideal for decorating bed- and bathrooms, saunas or nurseries.

FOSL-100-20W
Ordercode: 833-001

CONSUMER FIBER OPTIC STAR LIGHT - KIT 2

FOSL-50-50W (KIT) / order code: 833-002

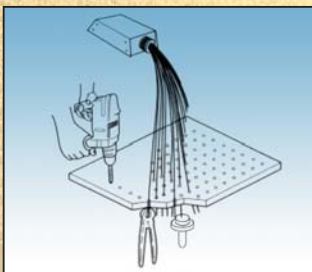

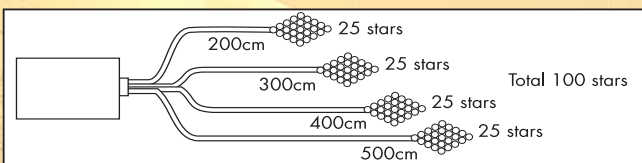

A small powerfull light engine with 50 watt halogene lamp, color wheel and control panel. With the control panel you can choose between seven static colors or automatic color flow.

5m fiber cable with 50 clear fiber strings. Maximum 290 strings can be connected.

Mounting a starry ceiling yourself.

Depending on the circumstances, you decide where to place the light engine. Keep in mind that you must always be able to change the lamp. When you use end pieces, pierce small holes of 6,2mm, when you only use fiber strings (for small pierce lights) pierce small holes of 1mm. In this case, you can attach the fibers at the top with a drop of glue. In some system-ceilings you can pierce the fibers directly through the material. If it is not possible to make holes in the ceiling, you can, for example, use 12mm board, saw this in a special shape, for example a cloud, and attach this at a distance under the ceiling. In this case, you can use the board to place the light engine on top.
